Introduction

1.1 Project profile

| | |
|-------------------|--|
| Project Name | <u>STUDENT INFORMATION</u> <u>MANEGMENT SYSTEM (SIMS)</u> |
| Project Objective | To provide end users |
| Developed For | Maharashtra State Board Technical , Mumbai |
| Developed At | Government Polytechnic, Hendaj, Murtizapur |
| Front-End | NetBean 7.3.1, JAVA |
| Back-End | MsAccess |
| Internal Guide | Prof. A. D. Thete |
| Developed By | Umesh Dadarao Dange Rutu Rajendra Ware Prathmesh Chandrashekhar Sawaikar Hrutik Arun Khade Pralhad Sudhakar wakte Rushikesh Govind Jadhav |

1.2 About The Topic

Normally in every institute the documents generation like Leaving Certificate, Bonafied Certificate, etc and other documents are given handed written. But these project covers the generation work of documents, it generates the pdf document of college documents with information filled.

1.3 About The Project

The Desktop application has been developed for our college (GPMZR) in an effort to make the document generation very easy. Compared to the existing condition the whole data of students is managed.

The working of the project is as follows.

In account section there is registration page. In these page the students have to enroll themselves by providing there whole information. After filling there information the whole information is added in database. Another feature is to modify which helps the student to modify its whole information if it needs to change. Also the user can delete its enrollment details and its whole information by entering its enrollment number.

In Create section the student can generate the BT card, Bonafied, TC and Identity card .To generate BT card the user have to enter the enrollment no then a BT card is generated in pdf format. To generate the BC the user have to enter Enrollment no, reason, Date and year then it will generate a bonafied in pdf format .To generate the tc user have to enter whole information. To generate ID card user have to enter enrollment no, mobile no and phone number.

In ROLL Call list section the user can view the list of roll call. The user has to select the branch, the semester and the current scheme. In remove dc student section the user can remove and add the DC student so each student can be assign as dc student. In class section the user can change its branch and class status If the user has change branch then he has to change its details from these section. Also if the user is gone from one sem to other he has to change it from here.

Technology Overview

➤ Netbeans IDE 2013

NetBeans is the IDE that we use to program FRC robots in Java. IDE stands for "integrated development environment", which means it's the program that acts like a text editor for your code, but also compiles and deploys the code. Other popular IDEs you may have heard of include Eclipse, jGRASP, and WindRiver. Compiling is the the IDE's way of checking your code for errors and translating your code to a binary file that's readable by the computer (in our case, the brains of the FRC robot: the cRIO). Deploying the code involves downloading such files onto the cRIO so that the robot can run it.

Features of Netbeans IDE 2013

The Netbeans IDE 2013 preview included many new features that enhanced the way developed work with everything for desktop application.

Some of the features of Netbeans 2013 are:

1. Templates and Sample Applications

NetBeans IDE gives you skeleton applications in the form of project templates for all the technologies it supports. In addition, it provides a set of sample applications, some of which can be recreated step by step by following a related tutorial available on NetBeans.org.

The IDE provides project templates and sample projects that help you create Java SE applications, Java EE applications, Java ME applications, HTML5 applications, NetBeans Platform applications, PHP application, and C/C++ applications.

2. Databases and Services

The Services window gives you access to many ancillary resources, such as databases, servers, web services, and issue trackers. You can start and stop databases and servers directly in the IDE. When working with databases, you can add, remove, and modify your data in the IDE. When you have deployed an application to a server, you can manage your deployed resources because they are displayed in the Servers node.

3. Plugin Manager

While using the IDE, you can always go to the Plugin Manager from the Tools menu to add, remove, or update the installed set of features. A wide variety of plugins are available for all types of development, from Java SE, Java EE, Java ME, HTML5, Groovy, and PHP to C/C++ development. Community contributed plugins are also available in the NetBeans Plugin Portal.

4. Action Items

The Action Items window automatically scans your code and lists commented lines containing words such as "TODO" or "FIXME", as well as lines with compilation errors, quick fixes, and style warnings.

➤ **JAVA - Front-End**

Java is a general-purpose computer-programming language that is concurrent, class-based, object-oriented, and specifically designed to have as few implementation dependencies as possible. It is intended to let application developers "write once, run anywhere" (WORA), meaning that compiled Java code can run on all platforms that support Java without the need for recompilation.

There are different styles of programming. Object-oriented approach is one of the popular programming styles. In object-oriented programming, a complex problem is divided into smaller sets by creating objects. This makes your code reusable, has design benefits, and makes code easier to maintain.

One of the reasons why Java is widely used is because of the availability of huge standard library. The Java environment has hundreds of classes and methods under different packages to help software developers like us.

➤ **Microsoft Access 2010 – Back-End**

- Microsoft Access is a database management system (DBMS) from Microsoft that combines the relational Microsoft Jet Database Engine with a graphical user interface and software-development tools. It is a member of the Microsoft Office suite of applications, included in the Professional and higher editions or sold separately.
- Microsoft Access stores data in its own format based on the Access Jet Database Engine. It can also import or link directly to data stored in other applications and databases.

Software developers, data architects and power users can use Microsoft Access to develop application software.

➤ **Features of Microsoft Access 2010**

1. Ideal for individual users and smaller teams

Microsoft Access is a simple desktop application that does not require any specific hardware or license to function. Hence, it is ideal for individual users and smaller teams who do not require larger and complicated data bases for extra price.

2. Is easier than client-server database to understand and use

Personal computer applications like Microsoft Access have taken over many applications which were earlier relegated to client-server database in the past. Users of Access need not undergo any special training to acquire the skills necessary to use the application

3. Import and export to other Microsoft Office and other applications

One of the most useful features of Microsoft Access is its ability to interface with data from many other programs. It is also easier to combine data that was created in other programs, transfer data between two other programs, or to accumulate and store data over the long term, occasionally exporting data to other programs such as Excel for analysis.

4. Hide/Show option for Ribbon

The Microsoft Access window consists of a variety of components helping users to work more efficiently. The important components are the Navigation Pane, Access work area, ribbon, shortcut menus, and Quick Access Toolbar. Some of these components are common to other Office apps whereas others are unique to Microsoft Access.

SYSTEM ANALYSIS AND DESIGN

3.1 INTRODUCTION

System analysis is the process of gathering and interpreting facts, diagnosing problems and using the information to recommend improvements on the system. System analysis is a problem solving activity that requires intensive communication between the system users and system developers.

3.2 EXISTING SYSTEM

The existing college website is static which makes it less interactive. It doesn't have a database connectivity. Moreover students didn't have an access to the details of the college through the site, hence they were not updated about the latest notices.

3.3 PROPOSED SYSTEM

In order to make the site dynamic and more interactive we have added different functionalities and features through different modules like Faculty Feedback system, Lost & Found System, Buy & Sell books, Search Friends, Dynamic Notice board, Query Forum, Library module. Hence, it makes it more dynamic when it comes to adding, deleting and editing notices, tenders etc. In response to which students can submit their willingness to appear for the drive along with his personal details. Provision has also been made to display the latest events and announcements associated with the college online. We have developed our project using the **three tier architecture** which uses the following languages.

3.4 SOFTWARE REQUIREMENTS

| | |
|------------------|--------------------------|
| OPERATING SYSTEM | : ANY VERSION OF WINDOWS |
| FRONT END | : JAVA |
| DATABASE LAYER | : MICROSOFT ACCESS 2010 |

3.5 MINIMUM HARDWARE REQUIREMENTS

| | |
|-------------|-----------|
| PROCESSOR | : i3 |
| CLOCK SPEED | : 2.5 GHZ |
| SYSTEM BUS | : 64 BIT |
| RAM | : 4 GB |
| HDD | : 40GB |

SYSTEM DESIGN

System design is the solution to the creation of a new system. This phase is composed of several systems. This phase focuses on the detailed implementation of the feasible system. It emphasis on translating design specifications to performance specification. System design has two phases of development logical and physical design.

During logical design phase the analyst describes inputs (sources), out puts (destinations), databases (data sores) and procedures (data flows) all in a format that meats the uses requirements. The analyst also specifies the user needs and at a level that virtually determines the information flow into and out of the system and the data resources. Here the logical design is done through data flow diagrams and database design.

The physical design is followed by physical design or coding. Physical design produces the working system by defining the design specifications, which tell the programmers exactly what the candidate system must do. The programmers write the necessary programs that accept input

from the user, perform necessary processing on accepted data through call and produce the required report on a hard copy or display it on the screen.

TIME BASED ANALYSIS

| DOCUMENT TYPE | MANUAL APPROACH | | SIMS APPROACH | |
|----------------------|-----------------|------------|---------------|------------|
| DAY TYPE :- | BUSY DAY | NORMAL DAY | BUSY DAY | NORMAL DAY |
| LEAVING CERTIFICATE | 15 MIN | 10 MIN | 2 MIN | 1 MIN |
| BONAFIED CERTIFICATE | 15 MIN | 10 MIN | 2 MIN | 1 MIN |
| BORROWERS TICKET | 2 DAY | 1 DAY | 5 MIN | 3 MIN |
| IDENTITY CARD | 1 DAY | HALF DAY | 5 MIN | 4 MIN |
| ROLL CALL LIST | 3 DAY | 2 DAY | 5 MIN | 2 MIN |

ACCURACY RATE

| DOCUMENT TYPE | NORMAL WAY | | SIMS WAY | |
|----------------------|------------|------------|----------|------------|
| DAY TYPE :- | BUSY DAY | NORMAL DAY | BUSY DAY | NORMAL DAY |
| LEAVING CERTIFICATE | 96% | 97% | 100% | 100% |
| BONAFIED CERTIFICATE | 97% | 98% | 100% | 100% |
| BORROWERS TICKET | 95% | 98% | 100% | 100% |
| IDENTITY CARD | 96% | 98% | 100% | 100% |
| ROLL CALL LIST | 92% | 95% | 100% | 100% |

WORKING METHODOLOGY

Module Wise Description :

➤ The Project modules are like :

1. Login Module
2. Create Module
3. Account module
4. Roll Call list module
5. DC Student module
6. Class and Help module

Login Module

The Login Module provides following:-

- 1) Login Page
- 2) Change User ID and Password

This is a Login Page of our Module. We can login and change User ID and Password successfully by using this login module.

Create Module

The Create Module provides functionalities to create following:-

- a) Bonafied Certificate
- b) Borrower's Ticket
- c) Leaving Certificate
- d) Identity Card

The above documents are directly generated in PDF format with the printed information of particular student. To generate Bonafied Certificate the handler has to put Enrollment No, Reason, Date and Year of particular Student.

To generate Borrower's Ticket the handler has to enter Enrollment No. Then the BT card is directly generated in the particular format. To generate Leaving Certificate the Handler has to enter all the official information of the particular student.

And at last to generate the identity card the handler has to enter the Enrollment no , Mobile No, Phone No.

Account Module

The Account module handles all the accounts and information of particular student. The End user can do Registration of particular users in the database of software so it can be retrieved from the database in the documents. In registration the end user has to fill the whole information of student in the database.

The Next option is to modify information. If a particular's information of a user is changed so from here the end user can change the information of the particular student. The end user has just to enter the information and have to modify it then it will be directly changed in database.

Roll Call List Module

In these module the user can see the roll call list of the whole department. The user has just to select department the scheme and the year then the user can directly see the list of roll call so it is very helpful.

DC Student Module

In these module the user can add the year down student or remove the year down student so it will not come in current roll call. The added student will directly be remove from the roll call list. And if the DC student is now not a DC student so it needs to remove from the option as DC student.

Class and Help Module

In these module the user can change the class as first year to second year of a particular student. If any student has change its branch or class it can be updated from here. In change class option the user has to select the branch, semester and scheme.

In the change branch option the user has to select enrollment no the semester, branch and scheme. The next section is help which the rules are given which helps the end user.

SCHEDULING OF OUR PROJECT

We had started our project journey at the last of 5th semester, around in a month of Janavary. Firstly we had discussed about what to implement, and then at the last we decided to make a software for student's section which is a Desktop Application that will be friendly for the officials.

Then the time came for deciding the title for the project. We thought, as we are implementing this project for Managing the Students Information then why shouldn't we keep **"SIMS – STUDENT INFORMATION MANAGEMENT SYSTEM"** as our project title. Thus we choose this as our project title.

TESTING

For testing we have adopted the build and test methodology. We used to test the modules manually like when one of our team members completed implementing his module then remaining used to test that module. We have used incremental model in our software development process as our requirements were going on increasing while implementing the project. All members coordinated and tested each other's modules.

Role and Responsibility

For Creating SIMS in our team each & every member did many different activities. For planning the design & necessary activities in group **Rutu Rajendra Ware** and **Prathmesh Chandrashekhar Sawaikar** played a standard role. To plan the activities which are essential for us, then at that time we all gathered together and decided & took important decisions. In our team for creating the modules of SIMS we had unique ideas and different knowledge that's why we all member performed Designing and Coding as per our module and each member tested the modules developed by other one.

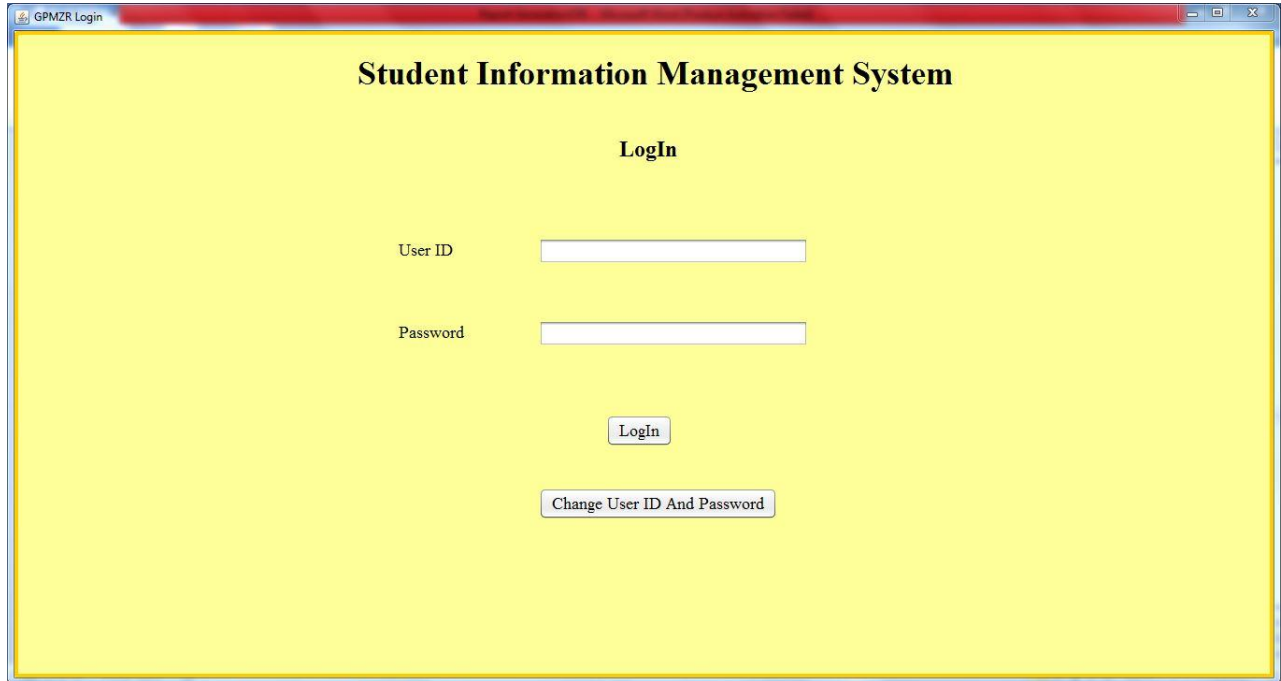

1. Similarly Coding of the various module in our project **Umesh D. Dange** played an essential role. **Pralhad S. Wakte** and **Rushikesh Govind Jadhav** do the essential work of Testing the SIMS. And the documentation work is done by **Rushikesh Govind Jhadhav**

Statistical Info

| | |
|-----------------------------|----|
| Total number of .java pages | 19 |

Login Module

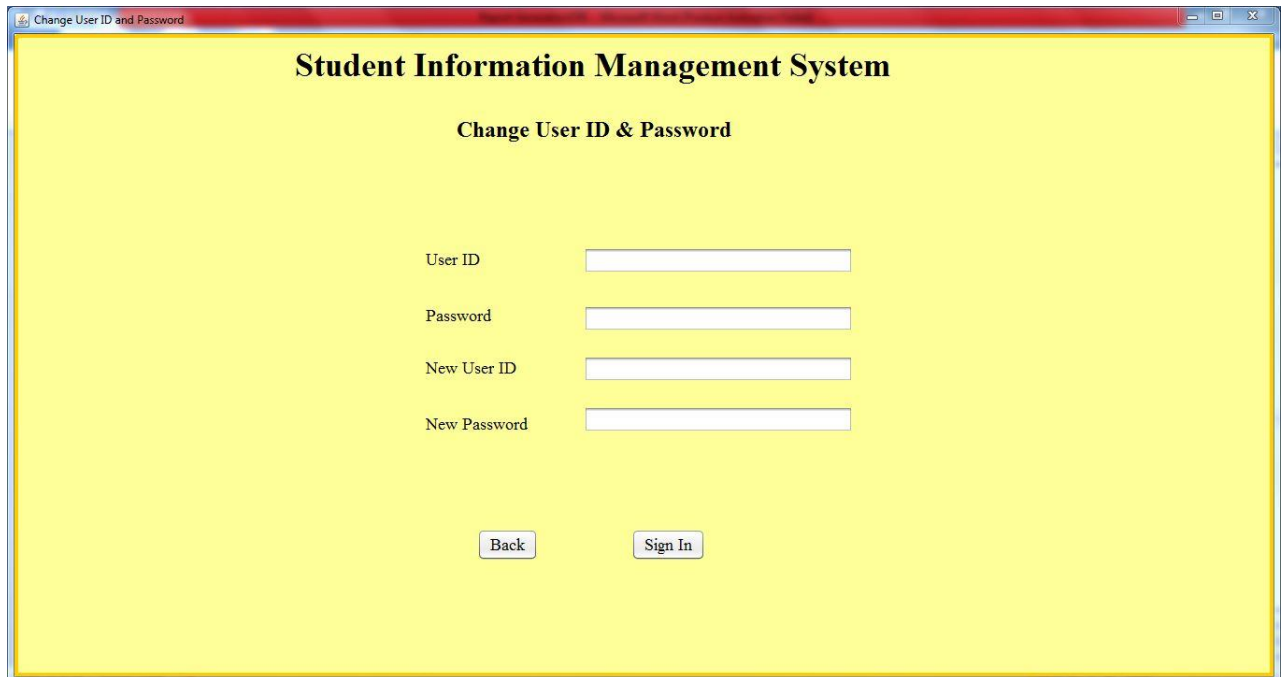

1) Login Page

The screenshot shows a web browser window titled "GPMZR Login". The page has a yellow background and contains the following elements:

- Student Information Management System** (Main Title)
- LogIn** (Section Title)
- User ID** label next to a text input field.
- Password** label next to a text input field.
- LogIn** button.
- Change User ID And Password** button.

2) Change User ID and Password

The screenshot shows a web browser window titled "Change User ID and Password". The page has a yellow background and contains the following elements:

- Student Information Management System** (Main Title)
- Change User ID & Password** (Section Title)
- User ID** label next to a text input field.
- Password** label next to a text input field.
- New User ID** label next to a text input field.
- New Password** label next to a text input field.
- Back** button.
- Sign In** button.

Home Page

Create Module

1) Registration Page

The screenshot displays the "Student Registration" form within the "Student Information Management System" web application. The form is set against a yellow background and includes the following fields and controls:

- Name:** Text input field.
- Enrollment No.:** Text input field.
- Date Of Birth:** Date picker.
- Caste:** Text input field.
- Name Of Mother:** Text input field.
- Nationality:** Text input field with "Indian" pre-filled.
- Date of Admission:** Date picker.
- Gender:** Radio buttons for Male, Female, and Other.
- Place of Birth:** Text input field.
- Institution last attended:** Text input field.
- Date Of Birth In Word:** Text input field with a "Fill Date Of Birth" button.
- Branch:** Dropdown menu with "----Select Branch----".
- Register Number:** Text input field with a "Fill Register Number" button.
- Blood Gr.:** Dropdown menu with "---Select Blood Group--".
- Mobile No:** Text input field.
- Address:** Text input field.
- Course / Semester:** Dropdown menu with "---Select Course---" and "---Select Semester---".
- Scheme:** Dropdown menu with "---Select Scheme---".

At the bottom of the form are "Back" and "Submit" buttons.

2) Modification Page

The screenshot shows a web application window titled "Student Modification" with a yellow background. The main heading is "Student Information Management System" followed by "Student Modification". The form contains various input fields and buttons for updating student information.

| | | | |
|---------------------------|---|---|--------------------------|
| Name | <input type="text"/> | Address | <input type="text"/> |
| New Enrollment No. | <input type="text"/> | Blood Gr. | ---Select Blood Group--- |
| Enrollment No. | <input type="text"/> | Course / Semester | ---SELECT COURSE--- |
| Date of Birth | <input type="text"/> <input type="button" value="Date"/> | | ---SELECT SEMESTER--- |
| Gender | <input type="radio"/> Male <input type="radio"/> Female <input type="radio"/> Other | | ---SELECT SCHEME--- |
| Caste | <input type="text"/> | | |
| Name Of Mother | <input type="text"/> | | |
| Nationality | <input type="text"/> | | |
| Date of Admission | <input type="text"/> <input type="button" value="Date"/> | | |
| Place of Birth | <input type="text"/> | | |
| Institution last attended | <input type="text"/> | | |
| Student Is DC | <input type="radio"/> Yes <input type="radio"/> No | | |
| Date Of Birth In Word | <input type="text"/> | <input type="button" value="Fill Date Of Birth"/> | |
| Branch | ----Select Branch---- | | |
| Register Number | <input type="text"/> | <input type="button" value="Fill Register Number"/> | |
| Mobile No | <input type="text"/> | | |

At the bottom, there are three buttons: , , and .

Account Module

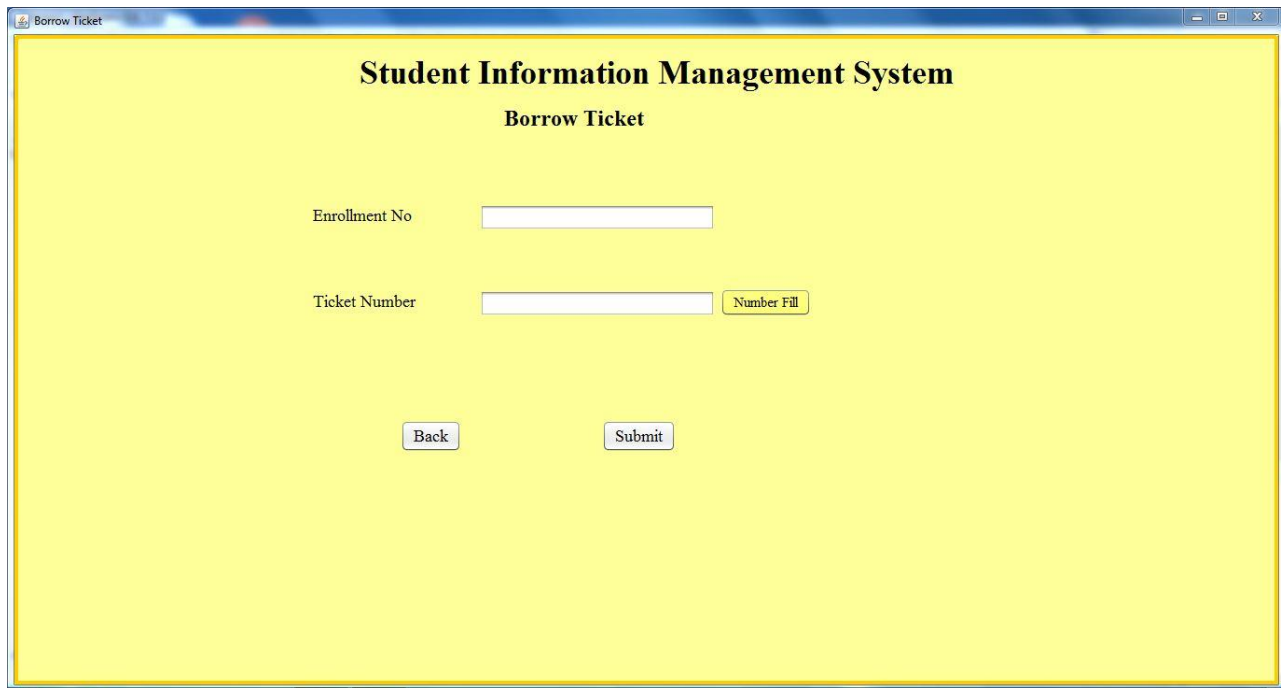

1) I card Page

The screenshot shows a web application window titled "I Card" with a yellow background. The main heading is "Student Information Management System" followed by "Identity Card". The form contains input fields for Enrollment No., Mobile No., and Phone No., along with Back and Submit buttons.

| | |
|---------------|----------------------|
| Enrollment No | <input type="text"/> |
| Mobile No. | <input type="text"/> |
| Phone No. | <input type="text"/> |

At the bottom, there are two buttons: , and .

2) BT Card Page

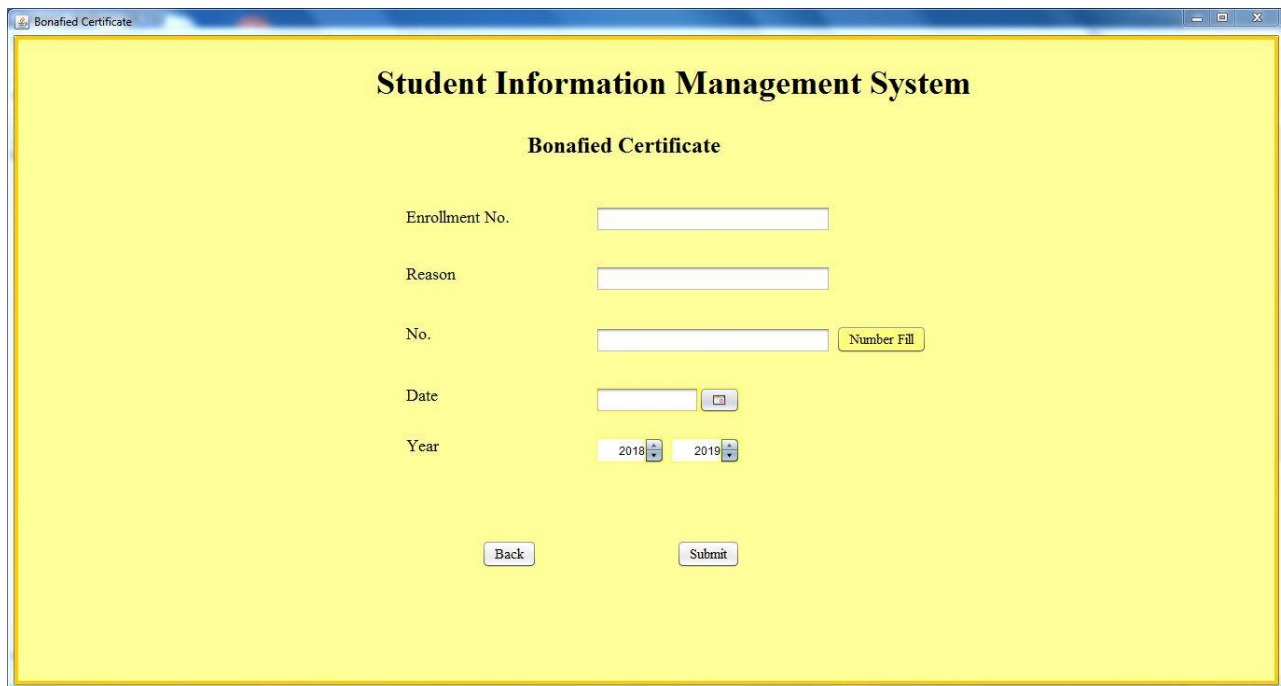

The screenshot shows a web application window titled "Borrow Ticket". The main heading is "Student Information Management System" followed by the sub-heading "Borrow Ticket". The form contains two input fields: "Enrollment No" and "Ticket Number". A "Number Fill" button is positioned to the right of the "Ticket Number" field. At the bottom of the form, there are two buttons: "Back" and "Submit".

Roll Call List Module

1) Computer Roll Call List

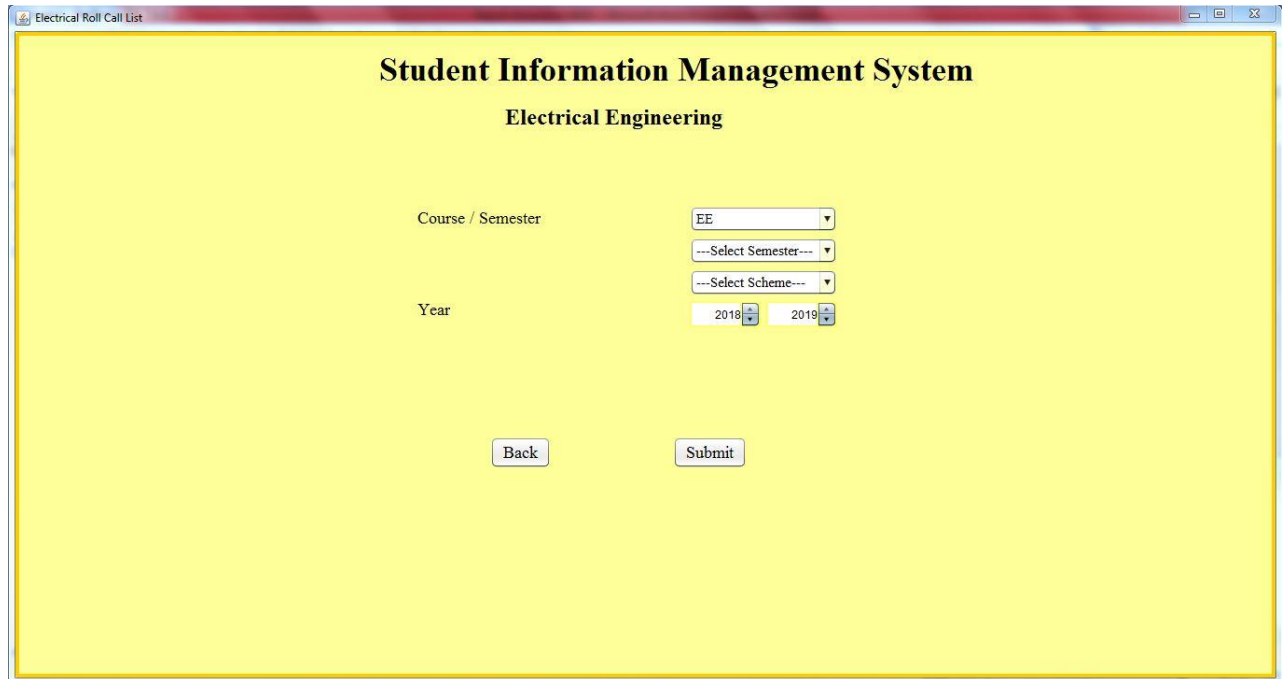

The screenshot shows a web application window titled "Computer Roll Call List". The main content area has a yellow background and contains the following elements:

- Student Information Management System** (Main Title)
- Computer Engineering** (Department)
- Course / Semester** label with a dropdown menu showing "CO".
- Year** label with two dropdown menus showing "2018" and "2019".
- Two buttons: **Back** and **Submit**.

Below the dropdown menus, there are two more dropdown menus labeled "---Select Semester---" and "---Select Scheme---".

2) Electrical Roll Call List:-

The screenshot shows a web application window titled "Electrical Roll Call List". The main content area has a yellow background and contains the following elements:

- Student Information Management System** (Main Title)
- Electrical Engineering** (Department)
- Course / Semester** label with a dropdown menu showing "EE".
- Year** label with two dropdown menus showing "2018" and "2019".
- Two buttons: **Back** and **Submit**.

Below the dropdown menus, there are two more dropdown menus labeled "---Select Semester---" and "---Select Scheme---".

3) Mechanic Roll Call List:-

The screenshot shows a web browser window titled "Mechanical Roll Call List". The page has a yellow background and contains the following elements:

- Student Information Management System** (Main Title)
- Mechanical Engineering** (Section Title)
- Course / Semester** label with a dropdown menu showing "ME". Below it are two more dropdown menus: "---Select Semester---" and "---Select Schem---".
- Year** label with two year selection boxes: "2018" and "2019", each with up and down arrows.
- Back** and **Submit** buttons at the bottom.

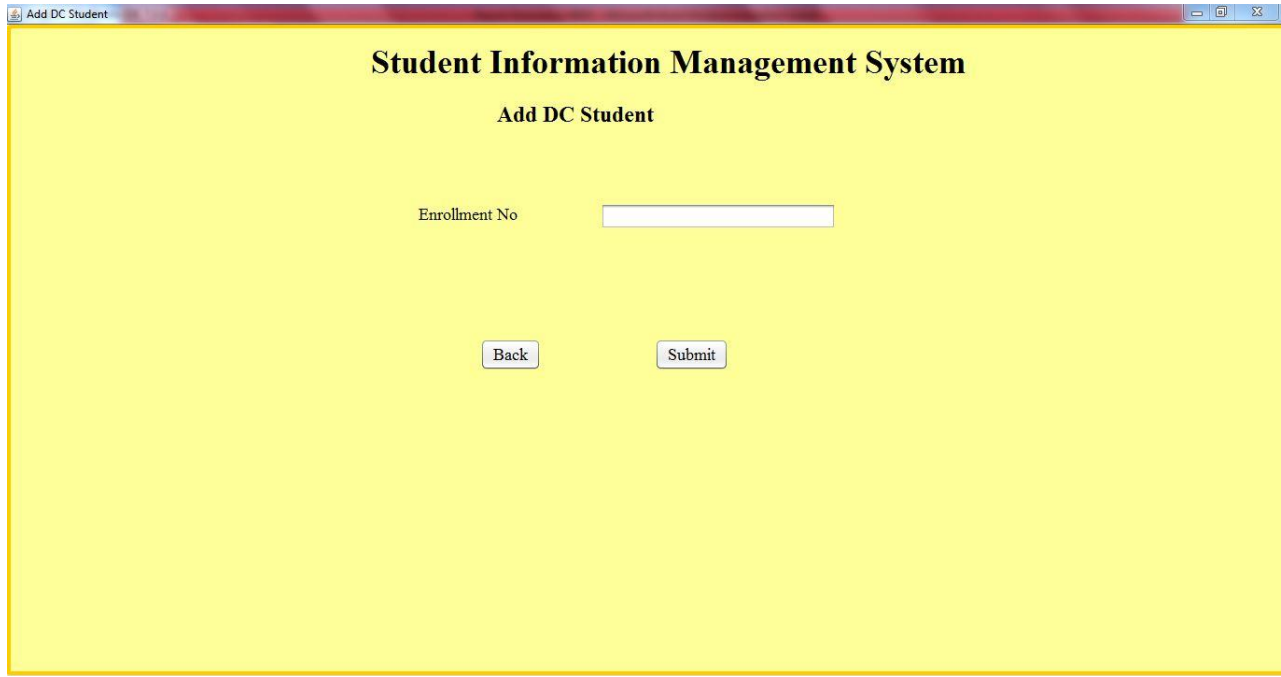

4) Information Technology Roll Call List:-

The screenshot shows a web browser window titled "Information Technology Roll Call List". The page has a yellow background and contains the following elements:

- Student Information Management System** (Main Title)
- Information Technology** (Section Title)
- Course / Semester** label with a dropdown menu showing "IF". Below it are two more dropdown menus: "---Select Semester---" and "---Select Scheme---".
- Year** label with two year selection boxes: "2018" and "2019", each with up and down arrows.
- Back** and **Submit** buttons at the bottom.

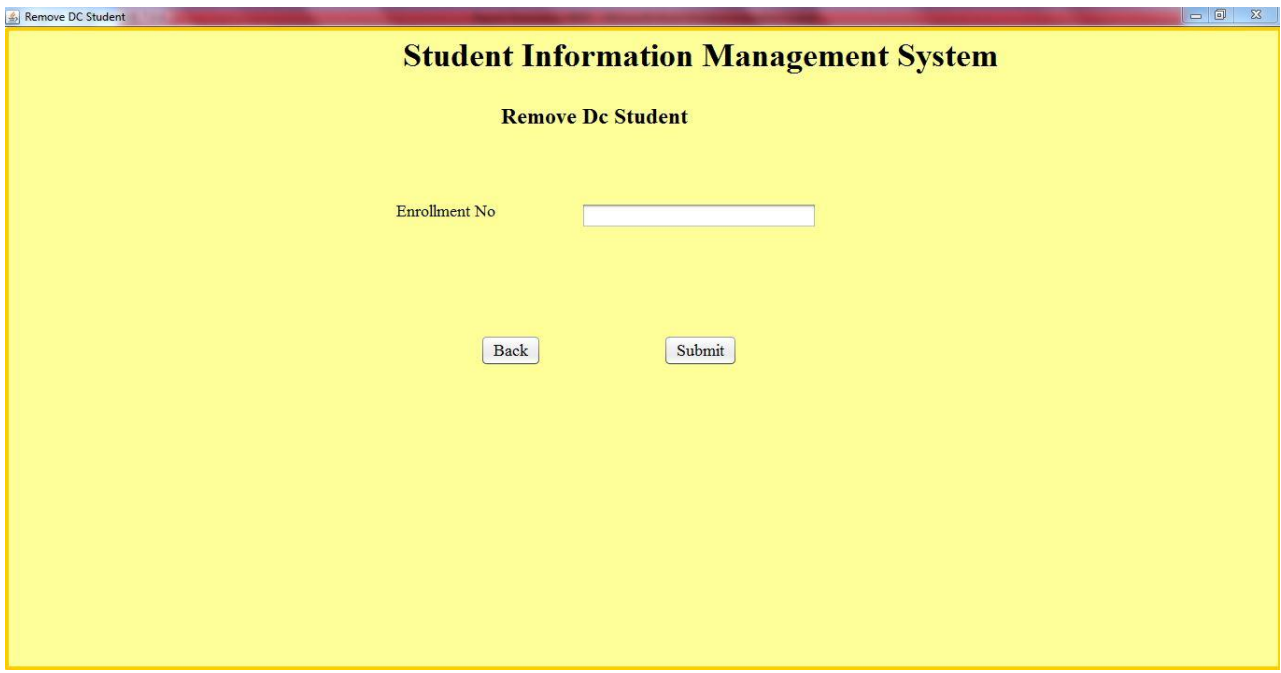

DC Student Module

1) Add DC Student Page

The screenshot shows a web browser window titled "Add DC Student". The page has a yellow background and a dark red header bar. The main heading is "Student Information Management System" in bold black text. Below it, the sub-heading is "Add DC Student" in bold black text. There is a text input field labeled "Enrollment No" with a white border. Below the input field, there are two buttons: "Back" and "Submit", both with white backgrounds and black text.

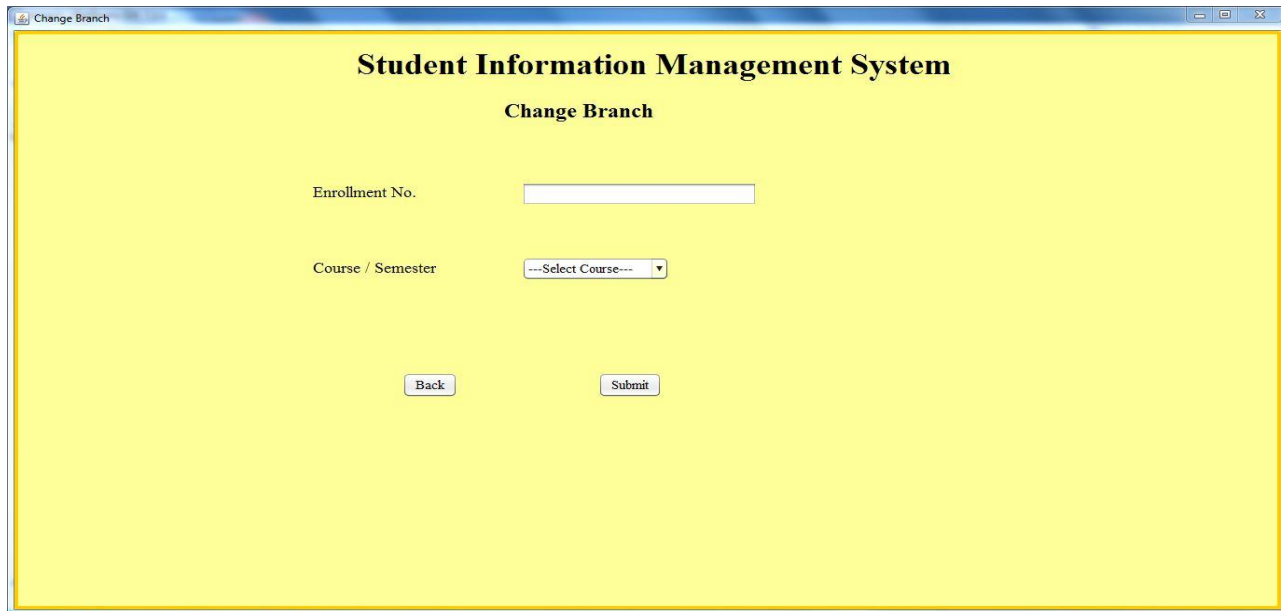

2) Remove DC Student Page

The screenshot shows a web browser window titled "Remove DC Student". The page has a yellow background and a dark red header bar. The main heading is "Student Information Management System" in bold black text. Below it, the sub-heading is "Remove Dc Student" in bold black text. There is a text input field labeled "Enrollment No" with a white border. Below the input field, there are two buttons: "Back" and "Submit", both with white backgrounds and black text.

Class Module

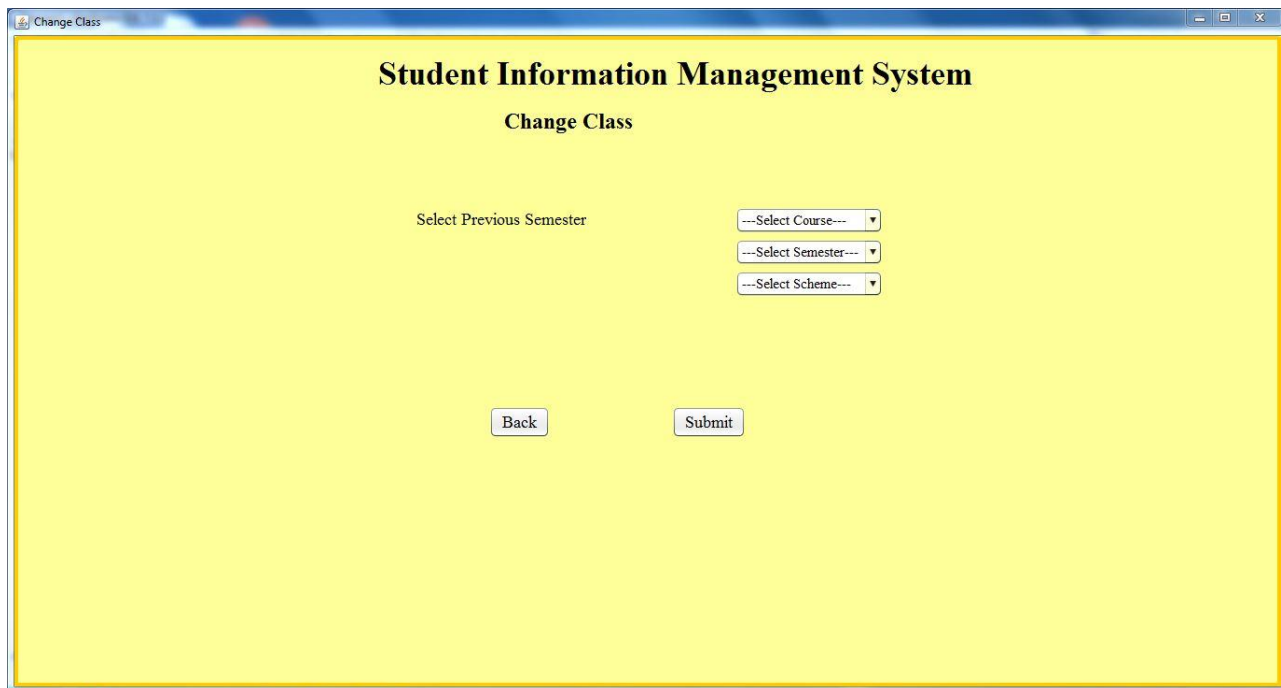

1) Change Branch page

The screenshot shows a web browser window titled "Change Branch". The page has a yellow background and contains the following elements:

- Student Information Management System** (Main Title)
- Change Branch** (Section Title)
- Enrollment No.** (Label) followed by a text input field.
- Course / Semester** (Label) followed by a dropdown menu with the text "---Select Course---".
- Back** (Button) and **Submit** (Button) at the bottom.

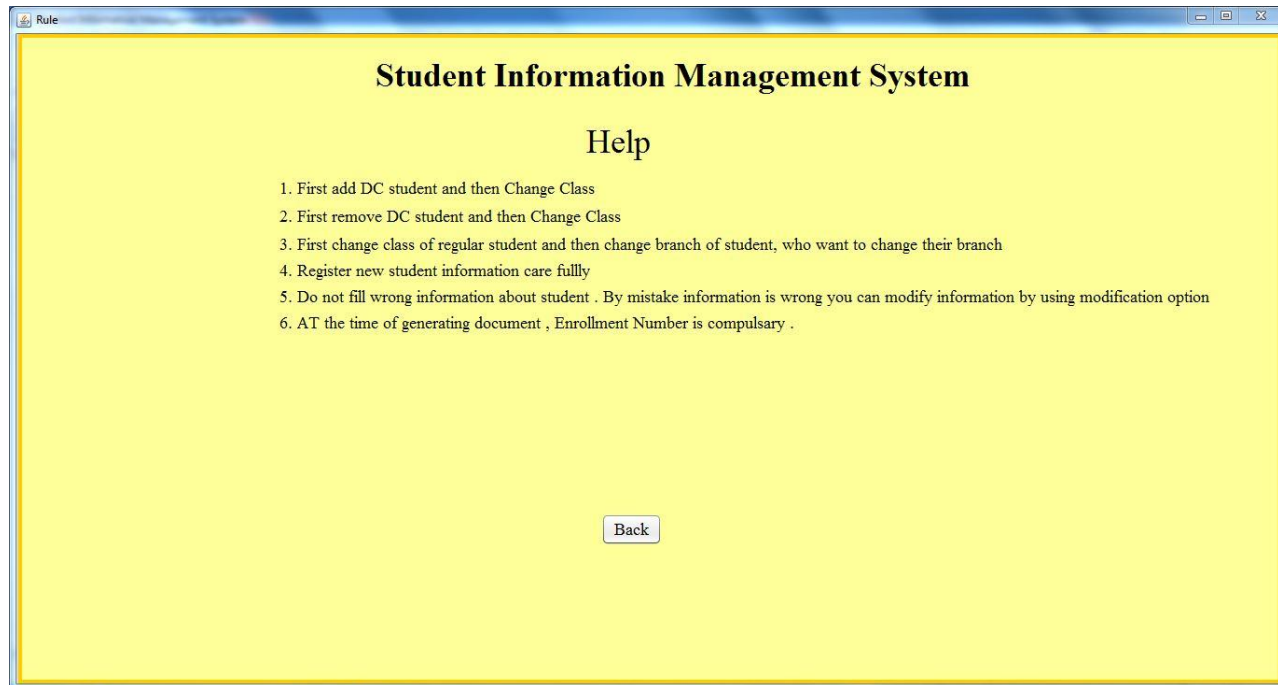

2) Change Class page

The screenshot shows a web browser window titled "Change Class". The page has a yellow background and contains the following elements:

- Student Information Management System** (Main Title)
- Change Class** (Section Title)
- Select Previous Semester** (Label) followed by three stacked dropdown menus with the text "---Select Course---", "---Select Semester---", and "---Select Scheme---".
- Back** (Button) and **Submit** (Button) at the bottom.

Help Module

Conclusion

The project report entitled "SIMS – Student Information Management System" has come to its final stage. The system has been developed with much care that it is free of errors and at the same time it is efficient and less time consuming. The important thing is that the system is robust. We have tried our level best to make the software as dynamic as possible. Also provision is provided for future developments in the system. The entire system is secured. This Software will be approved and implemented soon. The Project is successfully implemented with all the features mentioned in system requirements specification. Deployment of our software will certainly help the college to reduce unnecessary wastage of time, work of the services of student section like TC Generation, etc. and our site is dynamic too which is a great advantage.

Future Work

- These Desktop application can become a website.
- So it can be connected directly to the college website and it would get more dynamic then to all users.
- The new feature of multiple users like admin and student would be added so that the student can directly generate the PDF.
- New updated documents could be added in it so it will be more updated.
